Key Insights

1. Genre Matters More Than Art Style for Revenue

Puzzle ($51.0M), Casual ($48.5M), and Action ($47.7M) together generate over 54% of total revenue, while art style spreads revenue almost evenly ($51M-$57M each). Genre and monetization model are far stronger revenue levers than visual presentation.

2. Technical Stability Is the Clearest Driver of Rating

Crash rate is the strongest correlate of rating ($r = -0.37$). Games with a crash rate under 2% average a 3.75 rating versus 3.30 for those above 6% - a swing of about 0.45 stars, bigger than any genre, art style, or monetization comparison.

3. Session Length Behaves Independently of Design Choices

Average session duration (19.5 minutes) barely moves across genre, monetization, art style, or publisher tier, and shows no meaningful correlation with other metrics (all $|r| < 0.02$). Engagement strategy should focus on session frequency and retention instead.

4. Download Volume Does Not Guarantee Active Engagement

Only about 7% of downloads convert into active users. Racing and Sports convert best (7.4-7.5%); Strategy and RPG convert worst (6.6-6.7%). Acquisition and retention should be treated as separate funnels with separate KPIs.

5. Retention Drops Off Sharply and Predictably

Retention falls from 30.1% (Day 1) to 16.5% (Day 7) to 7.8% (Day 30) across virtually every genre. Onboarding and early-session experience, not genre, are the primary levers for long-term retention.

6. Indie Studios Punch Above Their Weight

Indie titles generate the largest revenue pool ($159.7M vs. $81.7M Mid-size and $30.2M AAA) and the best marketing return (7.85x), driven by title volume and efficient spend rather than higher

revenue per game.

7. Racing and Simulation Deliver the Best Marketing ROI

Racing (8.48x) and Simulation (8.28x) turn marketing dollars into revenue most efficiently. Casual (6.61x) is weakest despite being a top-3 revenue genre, suggesting it leans on organic and viral reach.

8. Revenue and Ratings Have Been Stable, Not Trending

Across 2018-2025 release cohorts, yearly revenue stays within $31M-$38M and average rating stays near 3.63 with no strong direction. A simple trend forecast puts 2026-2028 cohort revenue at roughly $33.5M per year.

Business Implications

- **Reduce crash rate** - the highest-leverage lever on user satisfaction.
- **Separate acquisition from retention** - treat downloads/marketing and engagement as different problems with different tactics.
- **Favor genre and monetization decisions over art style**, and direct marketing budget toward high-ROI genres such as Racing and Simulation.

Limitations: findings show correlation, not causation; data is game-level and cross-sectional, so forecasts are a baseline only.
